LOCKING DEVICE FOR ROLLING DOORS AND SIMILARS

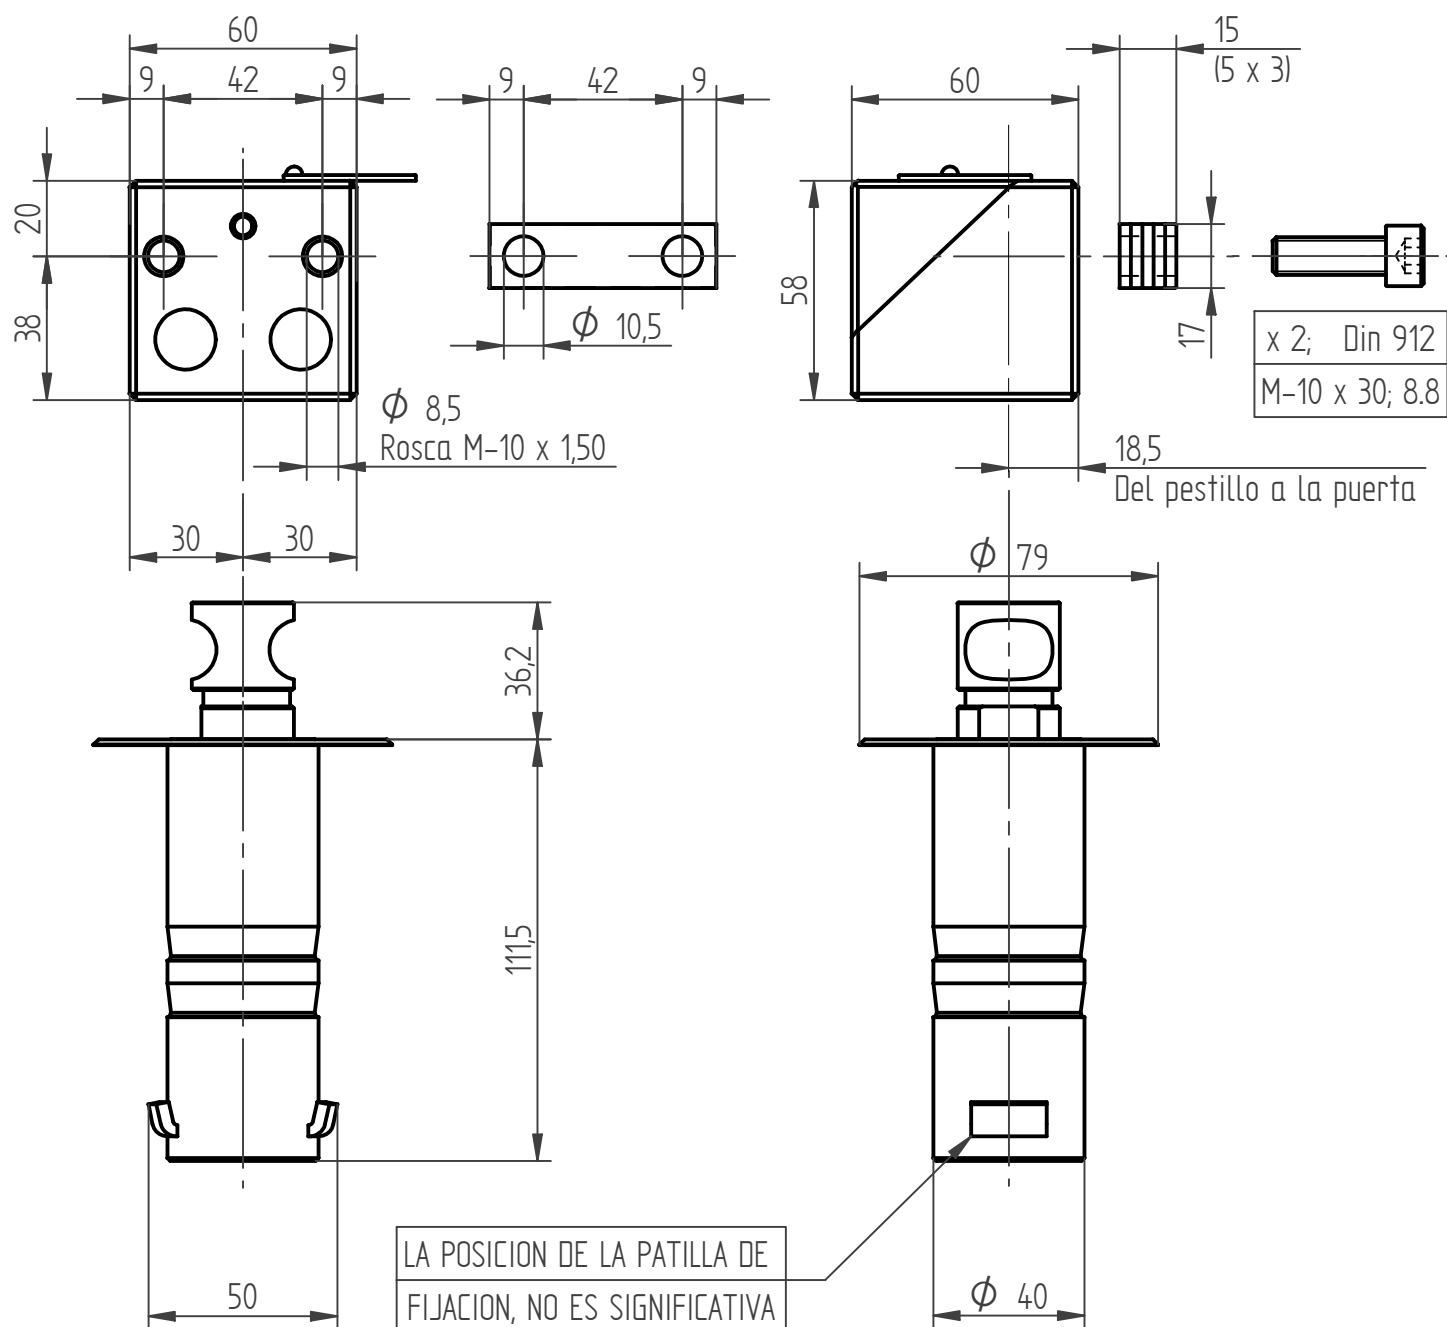

Compact and solid designed locking device, formed by a head top, where two levers are placed and function simultaneously by a high-security cylinder with drilling protection. At the closing position these levers block up the latch coming out from the tube built in the floor, and it makes altogether a very strong ensemble.

The body of the head has been made of solid chromium plated brass, the emergent latch of stainless steel and the two closing levers of hardened steel with zinc and chromium plated. All the other elements have been made of either stainless steel or with anti-corrosive treatments.

Versions

APK01; Also available with flat-key of points-cylinder

See the data sheets, with installation dimensions.
